

PLANNED PhD MODULE SESSIONS

Ph.D. students must satisfy special tutorial/laboratory module requirements. These serve the dual role of an educational experience involving direct contact with teachers, and a general review and test of pharmacological knowledge. A student should have a broad background in Pharmacology, plus knowledge in several areas beside that of the specialty with a level suitable for a graduate Ph.D. in Pharmacology, not necessarily at the level of a specialist.

This level should be attained in four (4) modules (5 for students enrolled prior to January 2012), including at least one experimental and one tutorial module, in specialized areas of Pharmacology unrelated to your specific research interest. A half course (which is in addition to your required minor subject) may be counted in lieu of a maximum of one of the tutorials. Prior approval of the supervisor, supervisory committee and Graduate Coordinator is required for all planned modules.

Student: _____ Student #: _____

Supervisor: _____

Student Thesis Title: _____

Module/Tutorial Title	Professor	Dates to be Taken
1. _____	_____	_____
2. _____	_____	_____
3. _____	_____	_____
4. _____	_____	_____
