

Ph.D. TUTORIAL/LABORATORY COMPLETION

Students must complete four breadth modules/tutorials in specialized areas of Pharmacology unrelated to your specific research interest. Students should select their modules in consultation with their supervisor and supervisory committee members.

A half course (which is in addition to your required minor subject) outside the student's major research area may be substituted for one of the breadth modules. Prior approval of the supervisor, supervisory committee, and Graduate Coordinator is required. When using a course to meet a tutorial/module requirement, the Course Coordinator must be informed at the beginning of the course and asked to complete this tutorial report at the end of the course.
