

Ph.D. PLANNED MODULE SESSIONS

Ph.D. students must satisfy special tutorial/laboratory module requirements. These serve the dual role of an educational experience involving direct contact with teachers, and a general review and test of pharmacological knowledge. A student should have a broad background in Pharmacology, plus knowledge in several areas beside that of the specialty with a level suitable for a graduate Ph.D. in Pharmacology, not necessarily at the level of a specialist.

This level should be attained in four (4) modules including at least one experimental and one tutorial module, in specialized areas of Pharmacology unrelated to your specific research interest. A half course (which is in addition to your required minor subject) may be counted in lieu of a maximum of one of the tutorials. Prior approval of the supervisor, supervisory committee and Graduate Coordinator is required for all planned modules.

Student's Name:			Student #:		
Supervisor's Name:			Co-Supervisor's Name (if applicable):		
Thesis Title:					
Module/Tutorial Title		Professor		Dates to be Taken	
Graduate Coordinator's Signature:			Date:
